## Reflow Profile

### ■ Reflow Temp/Time

### Notes:

1. We recommend the reflow temperature 245°C ( $\pm 5^\circ\text{C}$ ). The maximum soldering temperature should be limited to 260°C.
2. Don't cause stress to the epoxy resin while it is exposed to high temperature.
3. Number of reflow process shall be 2 times or less.

### ■ Soldering iron

Basic spec is  $\leq 5\text{sec}$  when  $320^\circ\text{C}$  ( $\pm 20^\circ\text{C}$ ). If temperature is higher, time should be shorter ( $+10^\circ\text{C} \rightarrow -1\text{sec}$ ).

Power dissipation of iron should be smaller than 20W, and temperatures should be controllable. Surface temperature of the device should be under  $350^\circ\text{C}$ .

### ■ Rework

1. Customer must finish rework within 5 sec under  $340^\circ\text{C}$ .
2. The head of iron cannot touch copper foil
3. Twin-head type is preferred.

- Avoid rubbing or scraping the resin by any object, during high temperature, for example reflow solder etc.

## Handling precautions

### 1. Drive Method

A LED is a current-operated device. In order to ensure intensity uniformity on multiple LEDs connected in parallel in an application, it is recommended that a current limiting resistor be incorporated in the drive circuit, in series with each LED as shown in Circuit below.

### 2. Storage

2.1 Do not open moisture proof bag before the products are ready to use.

2.2 Before opening the package: The LEDs should be kept at 30°C or less and 60% RH or less.

2.3 After the package is opened, the products should be used within a week or they should be keeping to store at  $\leq 20$  R.H. with zip-lock sealed.

### 3. Baking

It is recommended to baking before soldering when the pack is unsealed after 72hrs. The Conditions are as followings:

3.1 60 $\pm$ 3°C x (12~24hrs) and <5%RH, taped reel type

3.2 100 $\pm$ 3°C x (45min~1hr), bulk type

3.3 130 $\pm$ 3°C x (15~30min), bulk type
